

# What is INTERPRES?

ICanProve.IT

*Interpres* is a Latin word that simply means '**translator**'.

It is the name we chose for our innovative system that receives a signal from almost any monitor or sensor, converts to digital, and transmits to the cloud.

"Interpres, from ICanProve.IT, is helping customers successfully tackle over-loading issues that have been with them for years."

*Gavin Urtel, ICanProve.IT*

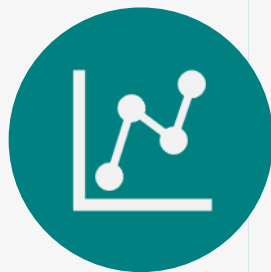

## Why choose Interpres from ICanProve.IT?

With Interpres, you don't need to replace or upgrade your on-board technology in order to have SMART connected solutions. Let us build you a bridge to the secure cloud from any on-board sensor.

Whether you are monitoring axle-load weight, proximity, temperature control, door seals or load conditions, capturing alerts and sharing in real-time can transform safety and consistency across your fleet.

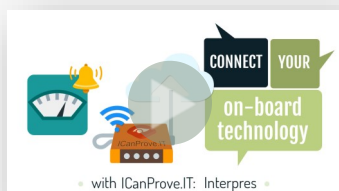

## Key features

1. Our **rugged on-board unit** connects reliably to any existing sensor, captures output, converts to digital, and transmits over a secure cloud connection.
2. **Personalised alerts** via SMS/ email allow your team to respond rapidly to critical events. Whereas data capture and **analytics** enable proactive management.
3. **Integrate** output with your existing FMS suite for simplicity and superior control. **Single-click connectivity** to live reports and add-ons, like video.

## What can you expect to gain?

- Real-time remote reporting from any monitor
- Secure online access to live reporting platform
- Trend analysis for proactive Health and Safety strategies
- Personalised alerts by app, SMS or email as required
- Drivers who know you 'have their back'
